ATTACHMENT FOR CLAIM AMENDMENTS

The following is a marked up version of each amended claim in which underlines indicates insertions and brackets indicate deletions.

- 1. A switched rejuctance machine comprising:
- a stator including a plurality of circumferentially-spaced stator segment assemblies with a stator segment core and winding wire wound around said stator segment core;
- a rotor defining a plurality of rotor poles, wherein said rotor tends to rotate relative to said stator to maximize the inductance of an energized winding; and
- a drive circuit that energizes said winding wire around said stator segment assemblies to control operation of said switched reluctance machine based on a rotational position of said rotor.
- 9. In a switched reluctance machine that includes a stator, a rotor and a machine housing, an improved stator comprising:
- a plurality of circumferentially-spaced stator segment assemblies that are arranged around an inner surface of said machine housing of said switched reluctance machine,
- each of said stator segment assemblies defining a salient stator pole that extends in a radially inward direction, wherein inter-polar stator slots are defined between adjacent stator segment assemblies, and

said stator segment assemblies including a stator segment core and winding wire that is wound around said stator segment core.

- 16. A switched reluctance machine comprising:
 - a machine housing;
- a rotor that rotates relative to said machine housing of said switched reluctance machine; and

a stator that is mounted on an inner surface of said machine housing, said stator including a plurality of circumferentially-spaced stator segment assemblies, wherein said stator segment assemblies include a stack of stator plates forming a stator segment core and winding wire that is wound around said stator segment core,

wherein each of said stator plates has a generally "T"-shaped cross-section, a radially outer rim section, and a tooth section that extends radially inwardly from a center portion of said radially outer rim section.
